PROJECTS

Cake Shop Management System (07/2021 - 08/2021)

- A software solution designed for cake shop management.
- The system automates key processes such as order management, inventory management.
- It also helps in customer relationship management.
- Technology used : HTML, CSS, PHP and MySQL.

Blockchain Based E-Voting System (09/2021 - 03/2022)

- It was a web application developed for voting system to stop the fraudulent activities and to make voting system more secure and transparent.
- With the help of this voting will be done 100%.
- Here we used antihacking technology Blockchain.
- Technology Used : HTML, CSS, SQLite, Node.js, Solidity.

Weather Application

- A web application which tracks user's location to give complete weather information.
- Live weather API used in this project.
- It is responsive for mobiles and laptops screen
- Technology used : HTML, CSS and JavaScript.
- Link : <https://github.com/UmangJagatap/stunning-journey>

Spotify Clone

- I did this project to strengthen my frontend development skill.
- I used Spotify developer API in this project.
- When I was working on this project I learned so many functionalities of real Spotify.
- Tech Stack : HTML, Tailwind CSS, Vanilla JavaScript, Node.js.
- Link : <https://github.com/UmangJagatap/spotifyclone>

Personal Portfolio Website

- I created this project to showcase my skills as a software developer.
- Tech Stack : HTML, SCSS and JavaScript.
- Link : <https://github.com/UmangJagatap/Personal-Portfolio-Website>
